

National Corvette Owners Association Recommends Battery Brain™
Automotive Newsletter Finds Many Reasons for Battery Brain Use

Clifton, New Jersey—(6/5/06)—Smart Energy Solutions, Inc., (OTC Bulletin Board: SMGY), inventor and manufacturer of the innovative Battery Brain™ battery monitoring device, was the focus of a recent review in the June Newsletter of the National Corvette Owners Association (NCOA – www.ncoa-vettes.com). It was founded in 1975 to enhance the enjoyment and driving experience of America's favorite sports car and is the largest Corvette Owners Association with approximately 19,000 members. Les Jackson, reviewer and co-host of the automotive radio show, “Cruise Control” found the Battery Brain to be a desired addition to the garage.

Smart Energy Solution’s Battery Brain is a battery-monitoring device that leverages a compact microprocessor with imbedded software to examine the condition of the user’s vehicle battery. The Battery Brain automatically disconnects the user’s car battery if it is being unnecessarily drained, allowing the user to preserve battery power and avoid being stranded as a result of a drained battery.

Jackson tested the Battery Brain III that includes two remote switches that fit on the user’s key chain. The remote signals the Brain to turn the battery on or off electronically. Being able to disconnect the battery with a remote also adds theft-protection. Another level of protection is built-in to the Brain. If the user forgets to disconnect the battery and something shorts in the wiring system, the Brain will detect the discharge and shut off the battery, most likely avoiding a disaster. The Brain also has its own on-off switch on the unit itself for those wishing to manually control the device.

“We find the Battery Brain to be a very welcome addition to the garage,” Jackson said. “It adds another measure of protection for all cars and a huge amount of convenience for those who like to use battery disconnect switches on collector cars. The remote is a dandy feature that we got used to very quickly.”

The Battery Brain is intended for private and commercial vehicle owners, including automobiles, trucks, RV/motorhomes, medium/heavy duty trucks, buses and emergency vehicles. The Battery Brain is able to save vehicle owners time and money by solving a common problem that leads to vehicle breakdown. In addition, Battery Brain III offers anti-theft protection.

The NCOA is the only group that helps Corvette owners meet the challenges surrounding parts, maintenance, and personal accident insurance with its own high standard of performance.
